Mintos iOS test

You should implement a simple, yet robust currency conversion application. It should contain a single screen with a list of currencies.

- 1. Each cell should have currency name and exchange rate written on it.
- 2. When you tap on the cell it should move to the top of the list, be selected and keyboard should appear.
- 3. After entering desired amount, all the currencies should also update against selected currency.
- 4. Currencies should be sorted in alphabetical order.
- 5. UI should correspond to provided specifications.
- 6. App should fetch new values every 1 second, using this endpoint https://api.exchangeratesapi.io/latest?base=EUR

You are allowed to use Swift and any libraries you desire.
